AIAE 2026 · INNOVATION SHOWCASE & STARTUP PITCHES

Wangari Farm OS

Whole-farm records and profit truth for Kenyan smallholders — offline, in Swahili, in KES.

Lewis Ndungu, Founder · wangari.imeantech.com · +254 114 971 070 · info@imeantech.com · Nairobi, Kenya

Live product at **wangari.imeantech.com** · prepared 9 Oct 2026 · event dates 23–25 Oct 2026, KICC Nairobi

THE PROBLEM

A smallholder's farm runs on memory and a notebook. Feed, eggs, milk, labour, doses, sales and losses are known only approximately, and the month's real profit is discovered *after* the decisions that shaped it. The three things that decide whether a season works — feed cost, mortality and price — are exactly the ones nobody writes down. Without records a farmer cannot price, cannot borrow (a bank will not lend against a record the farmer never wrote), and cannot prove origin for export due diligence.

WHAT IT DOES

One app covering the **whole farm**, not one enterprise: poultry, dairy and beef cattle, goats, sheep, pigs, fish, bees **and** crops — coffee, tea, avocado, macadamia, vegetables — in a single account. A few taps record daily output, feed, health, vaccinations, workers, store stock, sales and deliveries; the app returns **real profit in KES** and shows which enterprise is losing money.

- **Works with no signal.** Recording is fully offline: writes queue on the device and replay when signal returns, with *idempotent replay* so a duplicated submission returns the original result instead of writing twice.
- **Swahili and English**, money in KES. **M-Pesa payments** integrated (no payments taken yet).
- **Kenya-specific by design:** ANITRAC tag ranges and the §20 animal-movement record are built into the data model — no farmer has tagged animals yet, so we do not present them as in use.

WHY IT IS DIFFERENT

Almost every digital tool in this space is poultry-only, and the real competitor is paper. Wangari covers the whole farm, works offline, and attaches each new capability to tables that already exist rather than rebuilding — which is how one small team ships a farm-wide record instead of a broiler counter.

TRACTION — THE WHOLE PICTURE, 12 OCTOBER 2026

13 accounts	**7** email-verified	**12** farms registered	**4** farms holding livestock	**7** livestock groups	**6** crop enterprises

37 vaccinations scheduled	**12** production entries, 6 days	**21** money entries	**KES 0** revenue

Every subscription row in the system is **comped** — sponsor promo codes and goodwill extensions, amount zero. We are pre-revenue and pre-scale: a working, paid-ready product used on real farms, distributed through partners rather than paid acquisition.

TECHNOLOGY AND MATURITY

Code	**~110,000 lines, 532 source files**
Product surface	**78 screens, 67 data models, 65 API route files**
Database	**36 migrations, applied in production**
Automated tests	**1,410, all passing (949 backend, 461 frontend)**
Operation	**Live, health-monitored, per-farm data isolation**
Built since	**First commit 27 June 2026**
Team	**One founder — product, engineering and operations. No employees.**

BUSINESS MODEL

Pricing	**Starter KES 1,500/month · Growth KES 4,500/month**
Annual	**~33% cheaper than monthly**
Gross margin	**~99% — software has no marginal cost per farmer**
Scale anchor	**100 paying farmers = KES 150,000/month**
Distribution	**Partner-led: co-ops, agrovets, feed companies and county extension teams get sponsor-branded codes for their members, plus free onboarding**

WHAT WE DO NOT CLAIM

Revenue is zero and it is stated as zero. Animal tagging is built but unused. WhatsApp is in development. Thirteen accounts is early. Anyone can open the live product in five minutes and check every line above — that is the point of sending this page.

THE ASK

A place in the Innovation Showcase & Startup Pitches for a live phone demo to investors and partners. We are at pre-seed stage: product built, functional, and live — now seeking a demo opportunity to connect with investors to grow. The demo needs no WiFi (works offline). Two questions: pitch slot timing within 23–25 October, and preferred panel format.
